

KEYSTONE ENERGY BOARD

For more than 25 years, the Keystone Energy Board has provided a unique forum for leaders to discuss timely energy and environmental issues; explore opportunities for improved policymaking in the public and private sectors; and share perspectives with fellow leaders working in critical areas.

MISSION

The Energy Board's mission is to foster critical thinking on the interplay between energy, environmental, and economic policy in an off-the-record, non-attributable setting.

VALUE

When asked why they participate in the Energy Board, members consistently state three key attributes that make membership valuable:

- A unique diversity of perspectives on issues that members face daily in their own organizations.
- The opportunity to leave behind individual agendas and positioning and have unique off-the-record discussions about tough issues.
- The benefit of developing meaningful relationships with other key players in the energy arena.

STRUCTURE

The Energy Board is composed of about 50 individuals representing varied perspectives on energy and climate policy from the industry, technology, environment, consumer advocacy, and state and federal government arenas. Membership is by invitation only (*see reverse for a complete list of members*) and meetings take place three times a year.

TOPICS

Energy Board discussions reflect the interests of members. Recent topics include:

- Human, environmental, & geopolitical impacts of energy supply chains
- The relationship between American Indian tribes & energy companies
- The hope & the hype related to commitments of 100% renewable energy

Since I focus more on environment than energy, it's really interesting to get a better understanding of energy issues from the perspective of those who operate primarily in the energy industry because of the close links between energy and environment. It's also refreshing and uplifting to be in a room with people who still believe that sharing different perspectives can lead to good policy.

- Former EPA official

We face challenges in the next several decades when it comes to the future of transportation, energy, and the environment. In these complex times, Energy Board meetings offer smart reflections on essential topics, and, perhaps more importantly, a rich and diverse network of energy and climate experts.

- Mitch Jackson,
Chief Sustainability Officer,
FedEx

In work with Keystone, I have seen firsthand the impact that inclusion and collaboration have on actionable, shared solutions to our toughest policy challenges. The Energy Board helps me connect San Antonio's unique opportunities and challenges to the national and international energy policy landscape. I always leave our rich exchanges energized and ready to apply a fresh, creative lens to my everyday work.

- Former municipal utility CEO
